Name: _____   Date: _____

Answer Key: Build a Brilliant Big-Screen Browser: Kindergarten Web Quiz

Imagine you are building a digital playhouse using these 10 questions about computer code, colors, and the buttons that make things move.

---

1. Which of these is like the 'bones' or the 'walls' of a house that hold everything together in a website?

Answer: A) HTML

> HTML is used to build the structure of a webpage, just like bones build the structure of a body or walls build a house.

2. True or False: We use CSS to choose pretty colors like pink and blue for our website.

Answer: A) True

> CSS is the tool designers use to change how a website looks, including its colors and fonts.

3. JavaScript is the part of the code that adds _____ to a website so things can move.

Answer: C) Action

> JavaScript makes websites interactive, allowing for actions like clicking buttons or showing animations.

4. If you want to put a big 'Hello' title on your page, which one would you use?

Answer: B) HTML

> HTML is the code used to put words and titles onto a webpage so people can read them.

5. True or False: Computers need special code instructions to know where to put a picture.

Answer: A) True

> Computers aren't magic; they need code like HTML to know exactly where to show a picture on the screen.

6. When you click a button and a robot dances on the screen, that is _____ working.

Answer: B) JavaScript

JavaScript tells the computer how to respond when a user interacts with the page, like making a character dance.

7. Which one of these makes the buttons on a website look round or square?

Answer: C) CSS

CSS handles the design and shape of objects on a website to make them look nice.

8. True or False: HTML, CSS, and JavaScript all work together as a team.

Answer: A) True

All three languages work as a team to make a website look good, have content, and do cool things.

9. What is a 'web developer'?

Answer: A) Someone who builds websites

A web developer is the person who uses code to create the websites we use every day.

10. If you want a website to have a yellow background, you would use _____.

Answer: B) CSS

CSS is the styling language used to change colors and backgrounds on a page.
