

Name: _____ Date: _____

Answer Key: Dare to Name These 5 Basic Scientist Jobs: Pre-K Quiz

Young learners build confidence identifying nature and space tools while distinguishing between the scientists who study plants, bugs, and stars.

1. Which scientist wants to learn all about colorful flowers and tall trees?

Answer: B) A Plant Scientist

Scientists who study plants help us understand how flowers grow and stay healthy.

2. True or False: A Space Scientist uses a giant telescope to look at the moon.

Answer: A) True

Space scientists use telescopes to see things that are very far away in the sky.

3. A scientist who studies tigers and bears is a _____ scientist.

Answer: C) Animal

Animal scientists look at how creatures live, eat, and play.

4. What does a Weather Scientist study?

Answer: A) Rain and Snow

Weather scientists watch the clouds to tell us if it will be sunny or rainy.

5. True or False: An Ocean Scientist studies the fish in the deep blue sea.

Answer: A) True

The ocean is home to many fish, and scientists dive in to learn about them.

6. If you love to dig for cool rocks and stones, you are acting like a _____ scientist.

Answer: C) Rock

Rock scientists look at the ground to find different shapes and colors of stones.

Name: _____ **Date:** _____

7. Which tool would a scientist use to see a tiny crawling ant?

Answer: B) A Magnifying Glass

A magnifying glass makes tiny bugs look much bigger so we can see their legs.

8. True or False: A scientist who studies dinosaurs is looking at things that lived a long time ago.

Answer: A) True

Dinosaur scientists find bones from animals that lived way before we were born.

9. Looking at a wiggly worm through a glass is what a _____ scientist does.

Answer: B) Bug

Bug scientists study all the creepy crawlies in the garden.

10. Where does a Space Scientist look to do their work?

Answer: C) Up at the Stars

Space scientists look up at the night sky to find stars and planets.
