

Name: _____ Date: _____

Answer Key: Crack the Digital Code 2nd Grade Quiz

Outsmart sneaky links, build unbreakable digital keys, and decide when to alert a Trusted Adult in this high-stakes cybersecurity challenge.

1. A pop-up message on your tablet says, 'Click here to get a free Sparkle-Dragon pet!' You have never seen this site before. What is the safest choice?

Answer: B) Close the box and tell a teacher or parent.

Evaluating trust is key; unknown pop-ups often lead to scams or viruses, so reporting it to an adult is the safest action.

2. If someone you only know from an online game asks for your _____, you should say 'No' and tell a Trusted Adult immediately.

Answer: B) home address

Protecting PII (Personally Identifiable Information) like a home address is vital for physical and digital safety.

3. True or False: Using the name of your pet as your only password is a 'Strong Password' because it is easy for you to remember.

Answer: B) False

Strong passwords need a mix of symbols, numbers, and capital letters; simple names are easy for hackers to guess.

4. You are at the library using a public computer. After you finish your schoolwork, what is the most important final step?

Answer: C) Log out of all your accounts.

Logging out prevents the next user from accessing your private information or school accounts.

5. When you create a profile for a new learning game, you should use a _____ instead of your real full name.

Answer: B) screen name

Using a screen name or alias helps maintain digital privacy and prevents strangers from identifying you.

Name: _____ **Date:** _____

6. True or False: It is okay to share your password with your best friend if they promise not to tell anyone else.

Answer: B) False

Passwords should only be shared with parents or guardians; sharing with friends can lead to account misuse, even by accident.

7. Imagine you are playing a math game and another player starts saying mean things to you in the chat. What should you do?

Answer: B) Block them and tell an adult.

Cyberbullying should be handled by blocking the user and seeking help from a Trusted Adult immediately.

8. Before you download a new app on your tablet, you should always ask a _____ for permission.

Answer: B) trusted adult

Adults can help check if an app is safe, age-appropriate, and free of hidden costs or malware.

9. True or False: If a website asks for your birthday and your school name, you should ask an adult before typing it in.

Answer: A) True

Sharing your school and birthday can help strangers find your location, so adult guidance is required.

10. Which of these looks like a 'Smart and Strong' password for a 2nd grader's account?

Answer: C) Blue!Bird?22

This option uses capital letters, symbols, and numbers, making it much harder for a computer to guess.
