Among Us: 5th Grade Emergency Response & Safety Imposter Hunt

Critical analysis of 10 real-world rescue scenarios moves students beyond basic memorization into the territory of rapid decision-making.

1. While hiking in a wooded area, your friend accidentally brushes against a plant and develops an itchy, red rash with small blisters. What is the most effective first step to limit the reaction?

- A. Rub the area vigorously with a dry towel
- B. Apply a tight bandage to keep air off the skin
- C. Wash the skin with soap and cool water to remove oils
- D. Apply high heat to draw out the plant toxins

2. If a person is experiencing heat exhaustion, you should encourage them to drink a caffeinated energy drink to boost their alertness.

- A. True
- B. False

3. When checking a scene for safety before helping someone, what is the 'First Priority' of any first-aid responder?

- A. Diagnose the injury
- B. Call the person's parents
- C. Ensuring your own personal safety
- D. Moving the victim immediately

4. You see a younger student at lunch suddenly stop talking, turn blue in the face, and grab their throat with both hands. What does this 'Universal Sign' indicate?

- A. The student is having a localized allergic reaction
- B. The student is experiencing an asthma attack
- C. The student has a total airway obstruction (choking)
- D. The student is feeling dizzy and needs to sit down

5. When treating a nosebleed, the correct position is to tilt the head back as far as possible to stop the flow of blood.

- A. True
- B. False

6. Scenario: A classmate falls and has a deep scrape that is bleeding steadily. After putting on gloves, what is your next action?

- A. Apply direct pressure with a clean cloth
- B. Apply a tourniquet above the scrape
- C. Leave the wound open to the air

Name: _____ **Date:** _____

D. Pour cold water on it for twenty minutes

7. Which of these is a critical safety practice when using the 'Buddy System' during an outdoor field trip?

- A. Always stay within arm's reach of your partner
- B. Check in with each other visually every few minutes
- C. Only stay together if you are in a crowded place
- D. Swap buddies frequently to meet new people

8. In a laboratory or kitchen setting, if a chemical or hot liquid splashes into your eyes, you should flush them with water for at least 15 minutes.

- A. True
- B. False

9. If you are managing a sprained wrist using the R.I.C.E. method, what does the 'E' stand for?

- A. Exercise
- B. Elevation
- C. Emergency
- D. Examination

10. While participating in a campfire safety workshop, you learn that if your clothing catches fire, you must not run. Why is running dangerous?

- A. Running makes it harder for others to see you
- B. Running uses up too much of your energy
- C. The movement provides oxygen which fans the flames
- D. You might trip and cause a second injury
