

Name: _____ **Date:** _____

Answer Key: Smart Brain Memory Quiz for 1st Graders

Students practice recall by identifying how their brain stores farm animal sounds, lunch routines, and familiar faces during this daily warm-up activity.

1. What is it called when your brain saves a new friend's name so you can say it later?

Answer: B) Remembering

Remembering is the way our minds keep information like names or numbers for later use.

2. True or False: Your brain can remember the sound a cow makes even when you are at home.

Answer: A) True

Once your brain learns a sound and stores it, you can think of it anytime, even if you aren't near a cow.

3. When you sing a song many times to learn the words, you are helping your brain ____ the song.

Answer: C) store

Repeating something helps move it into storage in your brain so you don't forget it.

4. Which of these is a way your brain solves a problem, like finding a lost toy?

Answer: A) Thinking of places you played

Using your memory to look in places where you were recently is a cognitive way to solve a problem.

5. To remember the colors of the rainbow, some kids use the name 'Roy G. Biv.' This is a trick for your ____.

Answer: C) Memory

Special tricks and nicknames help our memory hold onto lists of information more easily.

6. True or False: Using a picture of a sun to remember the word 'Yellow' is a way to help your brain learn.

Answer: A) True

Name: _____ **Date:** _____

Visual cues, like pictures, help our brains connect new words to things we already know.

7. When you smell popcorn and suddenly remember going to the movies, your brain is ____ a memory.

Answer: A) finding

Smells can act as clues that help your brain find or 'retrieve' a specific memory from the past.

8. If you want to remember a phone number for just a few seconds, what should you do?

Answer: A) Say it out loud over and over

Repeating information out loud keeps it active in your short-term memory so you don't forget it immediately.

9. True or False: Your brain solves problems by only guessing and never thinking.

Answer: B) False

Cognition involves using what we know and thinking through steps to find the right answer.

10. A student looks at a big puzzle and decides to start with the corner pieces. This is a plan for ____.

Answer: C) problem-solving

Making a plan to fix or finish something is called problem-solving.
