

Name: _____ Date: _____

Answer Key: Neighborly Neighbors: A 2nd Grade Shared Borders Quiz

Young learners differentiate between natural and man-made boundaries while understanding how shared resources like parks and rivers connect different communities.

1. What do we call the line on a map that shows where one country ends and another begins?

Answer: B) A border

A border is a real or imaginary line that separates two areas, like states or countries.

2. True or False: A big river can act as a natural border between two places.

Answer: A) True

Nature often creates borders using physical features like rivers, mountains, or lakes.

3. When two countries share a border and get along well, they are often called ____.

Answer: C) Partners

Places that work together to solve problems or share resources are partners or allies.

4. If two towns share a large woods or park, what might they do to take care of it?

Answer: B) Work together to keep it clean

Geopolitics involves cooperation, where neighbors work together to manage shared resources.

5. True or False: Mountains are man-made borders created by building tall walls.

Answer: B) False

Mountains are natural features of the Earth, not something built by people.

6. Which of these is a reason why a country might want to be located near the ocean?

Answer: C) To trade goods using ships

Being near water is a geographic advantage because it allows ships to move food and toys to other places.

Name: _____ **Date:** _____

7. A land that is completely surrounded by water on all sides is called an ____.

Answer: A) Island

Islands have water borders on every side, which changes how people travel to see them.

8. True or False: People usually need a special pass or permission to cross some national borders.

Answer: A) True

Borders are used to manage who enters and leaves a country for safety and organization.

9. What might happen if two neighbors both want to use the same small pond for fishing?

Answer: B) They can make a fair rule to share

Geopolitics is often about creating rules or treaties so everyone can use resources fairly.

10. A ____ is a drawing that shows us where different places and borders are located.

Answer: C) Map

Maps are the primary tool geographers use to visualize how land and power are divided.
